SOLUTIONS

SOLUTION
01

TRAY WITH BLITZ+ LID

- carton with a stabile F-wave to protect the product from damage
- material in degradable corrugated board or compostable grass paper (40%)
- personalized tray-design and -layout or use of the lid as a advertising medium (scale effect on tray production)
- tray for 4, 6 or 8 products – lid replaces film

BLITZMATIC +

fully automatically foodtainer lid application machine with integrated lid dispenser

THE „BLITZMATIC+ SOLUTION“ – 10 ARGUMENTS

+ PACKAGING

- personalized and unpretentious design in form and layout (also without decorative label)
- perfect view of the packed product
- the lid is fast adapted to different foodtainers/varieties/sizes/promotions
- tight fixation without friction also with different productsizes/packaging girth (+/- 20mm)
- labelling from below or above (also with fully compostable „all-compost“ labels)

+ MACHINE

- Plug&Play with a stretching film machine
- the doublehead puts the lid from above soft but tight on the tray – no product interchangeability
- no problems with different product sizes (all products „safely fixed“)
- no risk to damage the product during the packaging process and the transport
- integrated lid dispenser – variable and adaptable to different foodtainer/lids – changeover times < 3 minutes (from 4 products to 6 products)

SOLUTION 02

BLITZTRAY WITH INTELLIGENT INTER-LOCKING SYSTEM

- carton with a stabile F-wave to protect the product from damage
- material in degradable corrugated board or compostable grass paper (40%)
- personalized tray-design and -layout
- tray for 4, 6, 8 products

ZIPPMATIC

tray-closing-machine with intelligent interlocking system

SOLUTION 03

MANUAL BLITZTRAY

- carton with a stabile F-wave to protect the product from damage
- material in degradable corrugated board or compostable grass paper (40%)
- personalized tray-design and -layout
- tray for 4, 6, 8 products

MANUAL

manually closing system- use for small quantities

GRASS PAPER

- More quality for the Blitz foodtainer.
- Packaging made of grass paper and grass cardboard are 100% biodegradable by adding 40% grass fibres.
- The production of grass paper and grass carton saves a lot of water and is produced largely without chemistry.
- The use of grass fibre in paper and cardboard production lowers the CO₂ emissions by up to 75%.
- The grass for the production comes only from compensation areas close to the paper production plants. Thus, no forage is diverted and long transport routes do not apply
